

June has the wettest since records began here in 1946 with 128.5 mm of rain by ~~21st~~ over twice the normal ~~two days, but over an week or better~~ of the 17th wettest day, the 18th, had a fall of 25 mm. Rain fell on 21st day, with 8 days being very wet & 20 wet. Only Sunshine has also been well down on normal, only 55% being recorded at 18.7 hours. The best day was 12.7 hours was the 20th, whilst 2 days had no sun at all.

June was also a cool month with mean daily temps almost 1.5°C below normal. The coldest since 1977. Apart from the 29th when the temp reached 21.5°C the month saw maximum daily temps well below expectation.

Thunder occurred on 2 occasions and hail on one but we had no ground or air frost in all a dismal start to summer.
